

# BIGGER BALLS FOR BIG TANKS

## LARGER THEN EVER, THESE BIOBALLS DON'T DEFY THE LAWS OF GRAVITY

- **SUPER-SIZE IT** – Sure, everyone sells bioballs. But do you really need 200 of them? Probably not - that's why we designed these 2" bioballs, they make a great biofilter media for aquariums and ponds, dramatically increase gas exchange and won't break your wallet filling your filter with them.
- **FLOWING PERFORMANCE** – Large spatial areas inside the bioballs allow water to flow thru the media with ease - keeping it clean and efficient. While other medias often clog and channelize, the large size and plastic construction make them non-clogging, easy to rinse and completely inert. Their also lightweight - so they can easily be used on filter trays without breaking them!
- **BREATH EASIER** – When used in trickle towers and wet-dry filters, the large diameter is excellent for removing those harmful gasses from your water. They can strip CO<sub>2</sub>, nitrogen and other gasses while increasing dissolved oxygen levels dramatically. Higher dissolved oxygen levels mean healthier fish, lower stress levels, higher growth and increased disease resistance.
- **SINKABILITY** – Place them in your filter and watch them slowly fall to the bottom. Unlike other plastic media, we made these suckers negatively bouyant. So instead of watching them float away on the surface, they can be placed in the area of your filter or pond that you want them.

# BIO-BALLS

Aquarium and Pond Filter Media

### TECHNICAL SPECIFICATIONS:

Size: 2" Diameter

Material: Polyethylene

Surface Area: 22243.3 mm<sup>2</sup>

Bouyancy: Slightly Negative

Volume: Approximately 4 Gal.

### MODEL#

8210

### DESCRIPTION

Bi0-Balls, 2" 125 Ct.

2640 Business Park Dr., Vista, CA 92081
