

ITS NOT THE SIZE OF THE SKIMMER BUT THE MOTION OF THE OCEAN

- **STEP INTO A WORLD THAT FITS IN THE PALM OF YOUR HAND**

The Fission Nano-Skimmer is the smallest protein skimmer in the world, measuring only 6.5" high and 2" in diameter. Powered by an efficient air injection pump, the patented design rips bubbles into a vortex foam froth, breaking apart proteins and organics, removing them from your nano-home. Easy-to-install, this nano-skimmer packs the power of fission into pint sized perfection.

- **POWER PUMP** - Air injection submersible pump pushes 84 gallons per hour through the skimmer, mixing bubbles and organics in a tornado fashion. The result - a dry foam froth that will make you go yuck!
- **PATENDED DESIGN** - Unique submersible design fits into almost any nano-style aquarium system. Put the pump next to it, beside it, or under it - it fits almost anywhere.
- **PINT SIZE** - The compact size of 6.5" H x 2" Dia. makes it easy to hide in tanks and filters.
- **WHATS INCLUDED:**
Each skimmer includes a submerisible venturi pump, protein skimmer, suction cups for mounting, 6 foam pads, hanging kit and two connection elbows.

FISSION™
Nano-Protein Skimmer
