

# nova extreme pro

## t5 high-output lighting fixture

**CURRENT**  
WHAT'S NEXT

- Individually contoured reflectors for maximum light intensity
- Cool running, performance-driven electronic ballasts
- Fan-cooled for superior color spectrum, output and lifespan
- Independent controls for dawn/dusk applications

The Nova Extreme Pro combines the best in both design and functionality, making it a great addition to any aquarium. The sleek black-aluminum construction not only maintains a low profile on the aquarium, its design also allows it to dissipate heat away from the aquarium, lamps and components. Individual polished reflectors coupled with highly efficient electronic ballasts maximize the light output and intensity of the SlimPaq T5 HO lamps.

SlimPaq high output T5 lamps offer a quantum leap in lamp performance, with more than 50% higher output compared to an ordinary T5, T8 or T12 fluorescent systems, and longer lifespan. Using our proprietary blend of tri-phosphors, the high levels produce stunning color rendition and penetrating intensity. The Nova Extreme Pro includes a fan-cooled aluminum housing, independent controls for dawn/dusk applications, individually contoured reflectors for increased light
