

DINNER IS SERVED

YOUR FISH WILL NEVER MISS A MEAL AGAIN

AquaChef automatically feeds your aquarium whether you are in town or on the road. It's easy to use digital timer and large multi-functional hopper makes feeding your fish a snap.

- **KEEP IT FRESH** - Whether your feeding flake foods, pellets or crumbled feed, this hopper will hold it. With a capacity of 35 grams, its large size holds enough food to keep your fish fat while your away. Hatch style feed door is completely adjustable, allowing you to decide how much food is dispensed at each meal. When feeding, the adjustable hatch doubles as a mixing stir bar, reducing the natural tendency for food to clump. Hopper is moisture resistant and easy to remove for filling and cleaning.
- **MODERN LOVE** - The sleek contour shape and black matted texture gives a new meaning to the word style. The large digital display shows the current time and is easy to view when programming. Fully adjustable clamp allows the feeder to mount on almost any style aquarium.
- **BE LAZY** - Simple to program, the AquaChef's timer allows you to set up to four automatic feedings per day. You can program it to feed at any hour of the day or night and have it deliver either a single or double feeding. The double feeding mode delivers two feedings within 60 seconds of each other - allowing you to feed your fish up to 8 times per day. If you don't want to be lazy, just press the manual override and the AquaChef will automatically deliver a single feeding at the press of a button.
- **WHATS INCLUDED:**
Each AquaChef includes a fish feeder with large hopper, mounting bracket, double sided tape for free standing installations, two AA 1.5V batteries and complete instructions.
