

FOR IMMEDIATE RELEASE:

**EXPERIENCE A WHOLE NEW LEVEL OF BRIGHTNESS,
CURRENT USA INTRODUCES T5 HIGH OUTPUT NOVA
EXTREME RETROFITS**

Vista, CA January 5, 2006. Current USA today announced the release of their new T5 high output Nova Extreme Retrofit kits. The new retrofit kits were specifically designed for professional canopy installations, allowing them to be used as a stand-alone solution or to supplement existing lighting systems.

Offering the latest in high performance electronic driving systems, Nova Extreme Retrofits are bundled with SlimPaq T5 HO lamps, which provide the highest lumen per watt output of any comparable system. “T5 high output lamps are definitely changing the aquarium industry in terms of lighting,” says Mike Lasky, VP of Sales and Marketing. “The efficiency of these lamps is amazing, they have a very high lumen to watt ratio and are extremely energy efficient.” Nova Extreme T5 Retrofits are currently available in 24”, 36” and 48” sizes in both 10,000K Daylight/460nm Actinic and dual 460nm Actinic combinations.
