NOVA EXTREME™ High Output T5 Lighting Fixture

PERFORMANCE IS EVERYTHING

Powered by an advanced electronic ballast, the high output T5 lamps are driven to their maximum potential while ensuring long lamp life. The patented circuitry inside each ballast ensures consistent high performance and low energy consumption while meeting FCC standards with EMI protection and low THD. All components are the highest quality available, meeting ISO 9001 standards, and are potted to reduce thermal stress and increase ballast life expectancy. A German parabolic reflector increases light output up to 99%, while an integrated fan cools both ballast and lamps for efficient operation.

THE ULTIMATE SPECTRUM

SlimPaq high output T5 lamps generate the ultimate spectrum for living reefs. Our proprietary blend of Nichia tri-phosphors provides maximum watts per lumen output, promoting high coral growth and excellent color rendition. Each fixture includes two 460nm Actinic Blue and two Daylight 10,000K SlimPaq high output T5 lamps.

NIGHT VISION

Integrated Moon White Lunar Lights cast a crisp moon glow for optimum nocturnal simulation, providing the perfect environment for nocturnal viewing, providing rhythmic moon luminance for increased spawning and reproduction.

TOTAL CONTROL

Two independent circuits with 6 ft. grounded power cords independently control 10,000K Daylight lamps and 460nm Actinic Blue lamps. Moon White Lunar Lights operate on their own transformer, providing complete control of timing periods.

NOVA EXTREME
