

FOR IMMEDIATE RELEASE:

Silent Operation and Compact Size, Current USA Releases the Newest Addition to the Prime Chiller line, the 1/10th HP Prime Chiller

Vista, CA May 1, 2005. Current-USA today announced today the release of their new 1/10th hp Prime water chiller, the most compact chiller available for tanks up to 60 gallons in size. Designed to run virtually silent, the chiller features a titanium heat exchanger and integrated temperature controller that accurately controls the water temperature.

“Most aquarists don’t have a lot of room underneath their stands for large water chillers”, says Mike Lasky, VP of Sales. “We wanted to make a powerful chiller, yet keep it compact in size and extremely quiet when it’s running.” As an additional feature, the chillers also feature an optional heater port on the back where a submersible heater can be plugged in and controlled by the chillers’ temperature controller. The Prime 10th HP chiller measures only 10”x8”x12” and is currently available.
